

Appl. No. 09/863,586
Amdt. dated June 11, 2003
Reply to Office Action of March 13, 2003

The listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (currently amended): A germicidal UV lamp, comprising:

- a. a housing, the housing having a UV light source therein and having at least one aperture allowing the passage of UV light out of the housing;
- b. a safety switch on the housing for activating the light source, the safety switch having a tool engaging portion adapted to engage an activation tool;
- c. a means for physically obstructing preventing finger access to ~~operate the~~ safety switch; and,
- d. an activation tool adapted to engage the tool engaging portion of the safety switch in order to selectively move the safety switch between an on and off position.

Claim 2 (currently amended): The germicidal UV lamp according to claim 1, wherein the means for physically obstructing preventing finger access to the safety switch comprises a switch cover formed on the housing, the switch cover having an opening therein adapted to allow passage of the activation tool, the opening being sufficiently small to prevent a human finger from being inserted in the opening.

Claim 3 (original): The germicidal UV lamp according to claim 1, wherein the activation tool has a protrusion and the tool engaging portion is an opening adapted to receive the protrusion.

Claim 4 (original): The germicidal UV lamp according to claim 1, further comprising a light shield extending from the housing, the light shield surrounding the aperture.

Claim 5 (original): The germicidal UV lamp according to claim 4, wherein the light shield has side walls with an upper edge, the upper edge of the side walls defining the aperture.

Claim 6 (original): The germicidal UV lamp according to claim 4, wherein the light shield is formed from a tinted translucent plastic material which absorbs UV light.

Claim 7 (currently amended): A germicidal UV lamp and degermination chamber comprising:

- a. a lamp housing, the housing having a UV light source therein and having at least one aperture allowing the passage of UV light out of the housing; and
- b. a degermination chamber comprising a wall with a slot therein for receiving objects to be sterilized by UV light from the aperture, a portion of the chamber being adapted to conform to the shape of the housing.

Claim 8 (original): The germicidal UV lamp and chamber according to claim 7, wherein the chamber includes means for opening the chamber to place therein an object to be sterilized.

Appl. No. 09/863,586
Amdt. dated June 11, 2003
Reply to Office Action of March 13, 2003

Claim 9 (cancelled)

Claim 10 (original): The germicidal UV lamp and chamber according to claim 7, wherein the degermination chamber is formed from material which blocks the transmission of UV light.

Claim 11 (original): The germicidal UV lamp and chamber according to claim 7, wherein the degermination chamber is formed from a translucent material that absorbs UV light.

Claim 12 (original): A germicidal UV lamp, comprising:

- a. a housing, the housing having a UV light source therein and at least one aperture allowing the passage of UV light;
- b. a switch formed on the housing, the switch in electrical communication with a power source; and,
- c. means selectively moveable in relation to the switch and the housing for preventing finger access to the switch when the means is moved to a first position and allowing finger access to the switch when the means is moved to a second position.

Claim 13 (original): A germicidal UV lamp, comprising:

- a. a housing having a UV light source therein and having at least one aperture allowing the passage of UV light;
- b. electrical terminals located on the housing and in electrical communication with a power source;
- c. a cover over the terminals, the cover preventing finger access to the terminals, the cover having an opening therein adapted to allow passage of an activation tool; and
- d. an activation tool, the activation tool formed from an electrically conductive material, the activation tool adapted to pass through the opening in the cover, the activation tool adapted to contact each terminal thereby completing a circuit and allowing current to flow through the terminals and the activation tool.

Claim 14 (original): The germicidal UV lamp according to claim 13, further comprising a light shield extending from the housing and surrounding the aperture.

Claim 15 (original): The germicidal UV lamp according to claim 13, further comprising a degermination chamber for receiving objects to be sterilized by the UV lamp, a portion of the chamber being adapted to conform to the shape of the housing.

Claim 16 (currently amended): A germicidal UV lamp, comprising:

- a. a housing having a UV light source therein and at least one aperture allowing the passage of UV light from the housing;
- b. a switch on the housing, the switch in electrical communication with a power source;
- c. a plate having a switch engaging portion, the switch engaging portion engaging the switch, and the plate having a tool engaging portion shaped to engage an activation tool;

Appl. No. 09/863,586
Amdt. dated June 11, 2003
Reply to Office Action of March 13, 2003

d. a switch cover, the switch cover covering the switch and plate, the switch cover having a an opening therein adapted to allow the passage of an activation tool; and,

e. an activation tool adapted to pass through the opening in the switch cover, the activation tool adapted to engage the tool engaging portion of the plate to selectively move the safety switch between an on and off position.

Claim 17 (original): The germicidal UV lamp according to claim 16, further comprising a back plate on the housing, the back plate surrounding the plate and the switch, the back plate forming a channel which controls the plate and the switch.

Claim 18 (original): The germicidal UV lamp according to claim 16, wherein the switch cover has an inner surface adjacent the plate and the switch, the switch cover having a channel formed on its inner surface which controls the movement of the plate and the switch.

Claim 19 (currently amended): A germicidal UV lamp, comprising:

a. a housing having a UV light source therein and at least one aperture allowing the passage of UV light;

b. a switch on the housing, the switch in electrical communication with a power source;

c. a light shield extending from the housing, the light shield having a window therein aligned with the aperture, the window permitting the transmission of UV light from the housing; and,

d. means for selectively blocking the transmission of UV light from the housing moveably attached to the light shield, the blocking means comprising an opening, the opening having a filter therein, the filter adapted to block the transmission of UV light while allowing passage of visible light, the opening being alignable with the window.

Claim 20 (currently amended): The germicidal UV lamp according to claim 19, wherein the means for selectively blocking the transmission of UV light comprises:

a. a guard plate, the guard plate moveably attached to the light shield or the housing,

b. the guard plate having a ~~first~~ second opening alignable with the window of the light shield to permit passage of UV light;

~~c. the guard plate having a second opening, the second opening having a filter therein, the filter adapted to block the transmission of UV light while allowing passage of visible light, the second opening alignable with the window.~~

Claim 21 (currently amended): The germicidal UV lamp according to claim 19, wherein the means for selectively blocking the transmission of UV light comprises a guard plate moveably mounted to the light shield, ~~the guard plate having an opening therein, the opening having a filter therein, the filter adapted to block the transmission of UV light while allowing transmission of visible light, the opening alignable with the window.~~

Appl. No. 09/863,586
Amdt. dated June 11, 2003
Reply to Office Action of March 13, 2003

Claim 22 (currently amended): The germicidal UV lamp according to claim 19, wherein the means for selectively blocking the transmission of UV light comprises a ~~guard plate, the guard plate moveably attached to the light shield as a sliding shutter, the sliding shutter able to be selectively positioned so as to prevent or allow the transmission of UV light through the window; the sliding shutter having an opening therein, the opening having a filter therein, the filter adapted to block the transmission of UV light while allowing transmission of visible light, the opening alignable with the window.~~

Claim 23 (new): A germicidal UV lamp comprising:
a housing having a UV light source therein and at least one aperture allowing the passage of UV light; and
a degermination chamber comprising UV absorbing translucent material, the chamber being open to the aperture for receiving UV light.

Claim 24 (new): The germicidal UV lamp of claim 23 further comprising a light shield extending from the housing, the light shield having a window permitting the transmission of UV light from the housing into the degermination chamber, the degermination chamber being adapted to conform to the shape of the light shield.

Claim 25 (new): The germicidal UV lamp of claim 23 wherein the UV absorbing translucent material is tinted.
